

CSE 322
Section A1
Nov 13, 2024

In this session, we will explore routing options in NS-3. To do so, we will work with two files:

1. examples/routing/simple-global-routing.cc
2. examples/routing/rip-simple-network.cc

Task 1

You will copy each file to the scratch directory. Run them step by step. In the end, you will have to submit a report of what you learned.

Check the generated tr and pcap files. Include them in your report.

For file 1, enable EnableMonitor option and analyze the generated simple-global-routing.flowmon file.

Task 2

```
// Network topology
//
//          SRC
//          |<== source network
//  A-----B
//  |       /| Costs: BD --> 6, BC --> 5, EC -->2
//  |       /|      all others --> 1
//  E--C    /
//  |       /
//  |       /
//  D
//  |<== target network
//  DST
//
```

Change the topology of rip-simple-network.cc to above and repeat Task 1.

Deadline: 1 PM.
Marking:
Completion -> 100
Sincere Attempt -> 100
Otherwise -> 0
